Command Line Interface (CLI)

Graphical User Interface (GUI)

WHY?

How?

By using Java packages

- AWT
- **Swing**
- SWT
- OpenJFX / JavaFX
- And many more...

Some facts!

- **Java \neq Javascript**
- **All classes in java are inherited from Object class.**

Top-level containers

- JFrame (What is usually the main container)
- JDialog (The small popups)

You can add to your project by,

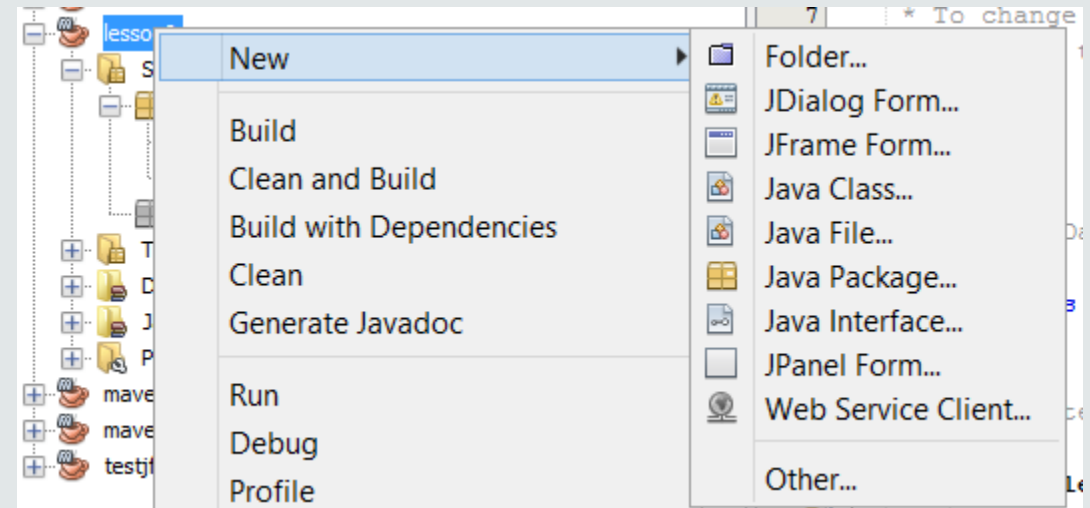

- Right click project -> New -> JFrame / JDialog Form

JFrame

JDialog

Swing Containers

☐ Panel ☐ Tabbed Pane ☐ Split Pane ☐ Scroll Pane ☐ Tool Bar ☐ Desktop Pane ☐ Internal Frame

☐ Layered Pane

Swing Controls

☐ Label ☐ Button ☐ Toggle Button ☐ Check Box ☐ Radio Button ☐ Button Group ☐ Combo Box

☐ List ☐ Text Field ☐ Text Area ☐ Scroll Bar ☐ Slider ☐ Progress Bar ☐ Formatted Field

☐ Password Field ☐ Spinner ☐ Separator ☐ Text Pane ☐ Editor Pane ☐ Tree ☐ Table

Swing Menus

☐ Menu Bar ☐ Menu ☐ Menu Item ☐ Menu Item / Check Box ☐ Menu Item / RadioButto

☐ Popup Menu ☐ Separator

Swing Windows

☐ Dialog ☐ Frame ☐ Color Chooser ☐ File Chooser ☐ Option Pane

Swing Fillers

☐ Glue ☐ Horizontal Glue ☐ Horizontal Strut ☐ Rigid Area ☐ Vertical Glue ☐ Vertical Strut

AWT

Beans

[JFrame] - Properties X

Properties Events Code

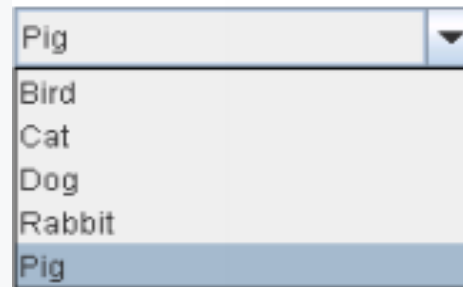

Properties

defaultCloseOperation	EXIT_ON_CLOSE	...
title		
Other Properties		
alwaysOnTop	<input type="checkbox"/>	...
alwaysOnTopSupported	<input checked="" type="checkbox"/>	...
autoRequestFocus	<input checked="" type="checkbox"/>	...
background	[240,240,240]	...
bounds	<Not Set>	...
cursor	Default Cursor	...
enabled	<input checked="" type="checkbox"/>	...
extendedState	0	...
focusCycleRoot	<input checked="" type="checkbox"/>	...
focusTraversalPolicy	<default>	...
focusTraversalPolicyProvider	<input type="checkbox"/>	...
focusable	<input checked="" type="checkbox"/>	...
focusableWindowState	<input checked="" type="checkbox"/>	...

graphics	<none>	...

[JFrame]

JButton

JComboBox

JCheckBox

JPasswordField

5

JMenu

JList

JRadioButton

JTextField

JSlider

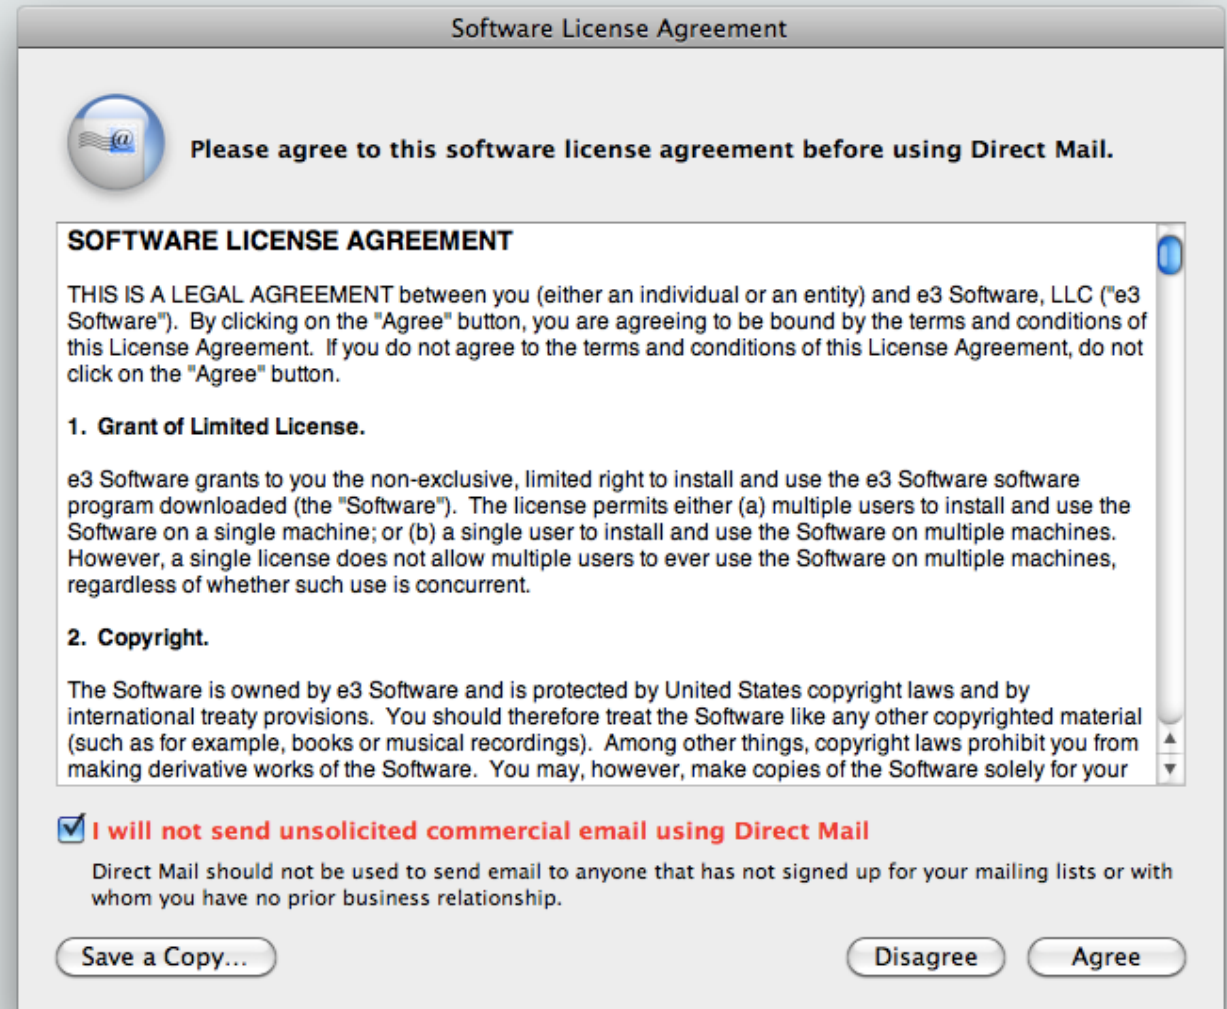

JSpinner

Some swing components

Which one to use?

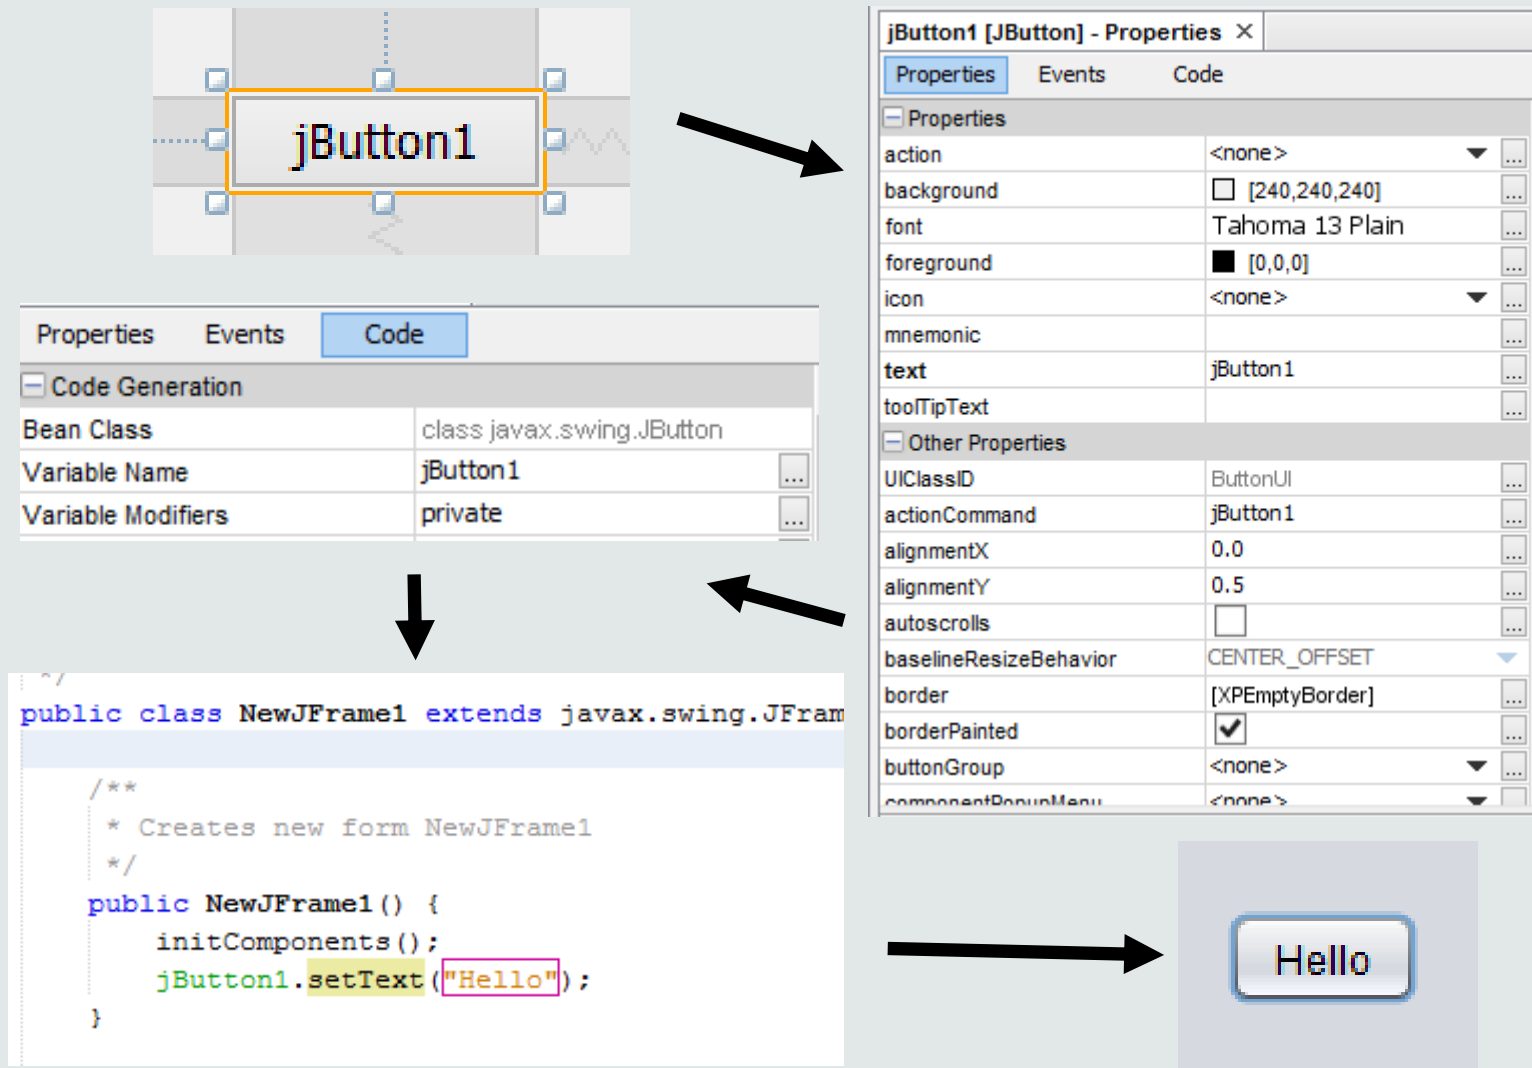

Assume that you have
to chose the perfect
GUI component for
getting the user's
agreement for the End-
user license agreement.

Component properties

You can change via,

- The IDE (In situations where you are starting off with that property)
- Code (If you want to change while running the program)

Event – **Release** of a First Day Cover

Listener – **Postal Service in Sri Lanka**

Reaction - **Send** the First Day Cover to the home

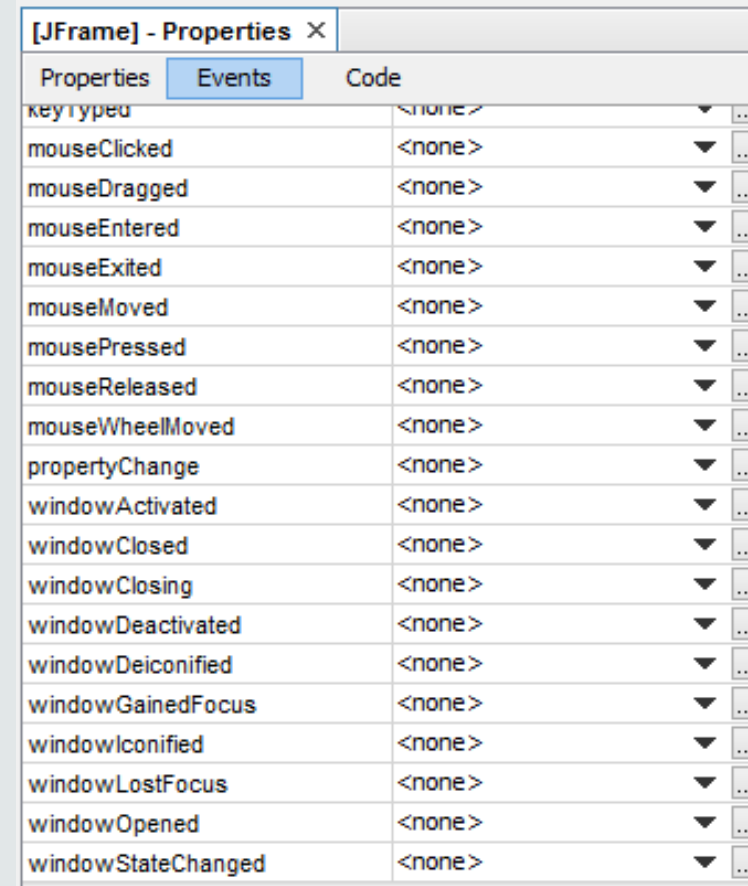

Event – Click the button
Listener - mouseClicked
Reaction – `clickPerformed(ActionEvent e)`

Event – Move the mouse over the button
Listener - mouseMoved
Reaction – `mouseMovePerformed(ActionEvent e)`

Event – Move the mouse out of the button
Listener - mouseExited
Reaction – `mouseExitPerformed(ActionEvent e)`

Event Listeners

- Listeners are objects which “listen” for a particular event and then react to it.
- Listeners comes as interfaces found in `java.awt.event`.
- *WindowListener*
- *ActionListener*

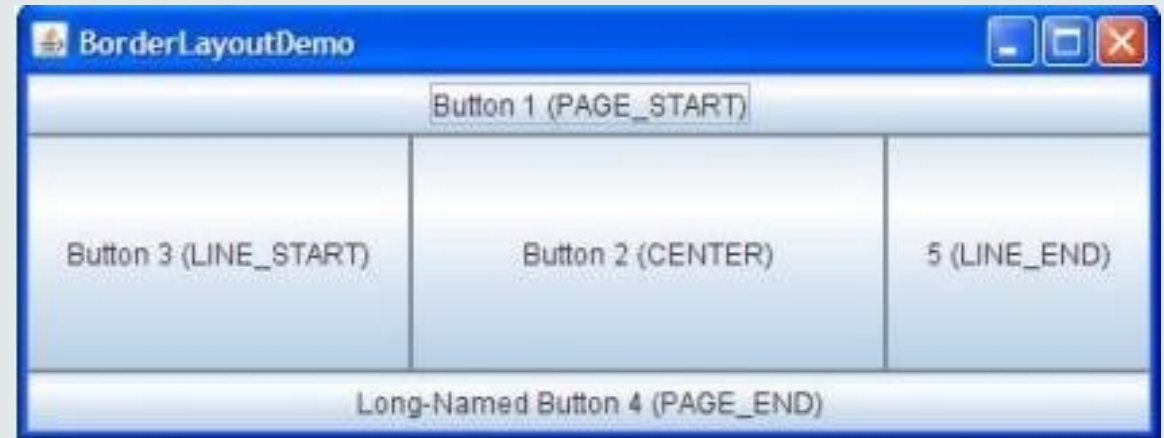

[JFrame] - Properties X	
Properties	Events
keyTyped	<none>
mouseClicked	<none>
mouseDragged	<none>
mouseEntered	<none>
mouseExited	<none>
mouseMoved	<none>
mousePressed	<none>
mouseReleased	<none>
mouseWheelMoved	<none>
propertyChange	<none>
windowActivated	<none>
windowClosed	<none>
windowClosing	<none>
windowDeactivated	<none>
windowDeiconified	<none>
windowGainedFocus	<none>
windowIconified	<none>
windowLostFocus	<none>
windowOpened	<none>
windowStateChanged	<none>

Some interesting ActionListener Methods

- Object getSource()
 - Returns the object that fired the event.
 - Ex - evt.getSource()
- int getModifiers()
 - Returns an integer representing the modifier keys the user was pressing when the action event occurred.
 - Ex - evt.getModifiers()

Layout managers

- Different layout managers specify different ways of placing components.
- NetBeans provide “Free Design” option which is very flexible.
- You can also select a layout as well by,
Right click -> Set layout ->
Select some layout

BorderLayout

Some interesting points regarding certain GUI components

- JComboBox
 - `jcbbox1.addItem("Mr.");`
 - `jcbbox1.getSelectedItem();`
- JCheckBox
 - `jchkbox1.isSelected();`
 - `jchkbox1.setSelected(false);`
- JList
 - `jList1.getSelectedValuesList()` (or `getSelectedValue()`)
- JRadioButton - Only one button from a group can be selected
 - `ButtonGroup gender = new ButtonGroup(); group.add(radioButton1);` (or by the properties window)
 - `boolean sel = jRadioButton1.isSelected();`

THANK YOU!

IF YOU HAVE ANY
QUESTIONS, PLEASE
BRING THEM UP IN
THE FORUMS!
